

Creative Thinking

You have discovered a new fruit or vegetable that has never been seen before. Your task is to create a fact sheet about this newly discovered fruit. This can be presented using technology or paper.

1. Name it.
2. Illustrate it.
3. Describe in great detail - skin, flesh, smell, taste, texture, seeds, colour, size.
4. Where does it grow - underground, water, on tree, on bush, desert, rainforest, deserted island
5. How do you eat it - cooked, peeled, raw, strained, barbequed

An example being:

Octolemon

This fruit is yellow in colour with rough bumpy skin and with at least eight dangling tentacles. It is approximately the size of a small football.

It must be thoroughly stewed for four hours otherwise it not only tastes yucky but it is like eating a rubber band.

Perfectly cooked it tastes like a burst of sunshine in your mouth.

When you bite into it raw it tastes like sour fish.

It was discovered when it washed up on North Broulee beach but originated from shorelines of deserted tropical islands.

Several pieces of the fruit found their way into the ocean following the horrific cyclone that recently passed through the Pacific Ocean.
